** Apple Certification Pending

Improve the sound of your live remotes today with Tieline's Mic Adapter...

Tieline's Mic Adapter is a 20Hz-20kHz CD quality digital audio input device that enables you to attach your favourite dynamic pro microphone to an iPhone 4®

Competing mic interface solutions, including wired interfaces that attach to the iPhone headphone input, roll off quickly after 200Hz reducing the richness of the audio quality.

Tieline's Mic Adapter delivers a full octave of richer, warmer, low frequency response from 20Hz to 200Hz and perfectly reproduces the mid and high frequency ranges.

The Tieline Mic Adapter features:

- 2 stereo headphone outputs for live interviews between the remote site and the studio
- An XLR input for attaching your choice of dynamic mic
- Adjustable mic gain attenuation with Automatic Gain Control (AGC) ON/OFF
- Stereo line level input for recording external sources to the iPhone®
- Mini-USB power input for iPhone charging during long broadcasts
- Internal AAA battery slot to power the Mic Adapter and preserve your phone battery
- Robust, light, ergonomic design for mobile reporting

Use the Tieline Mic Adapter for:

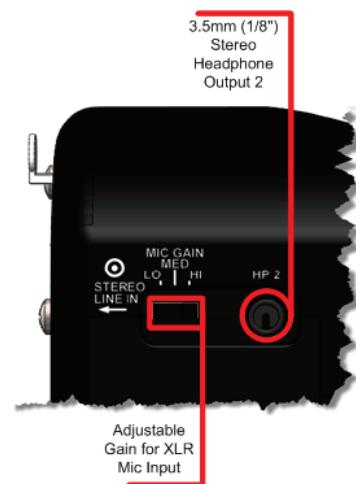

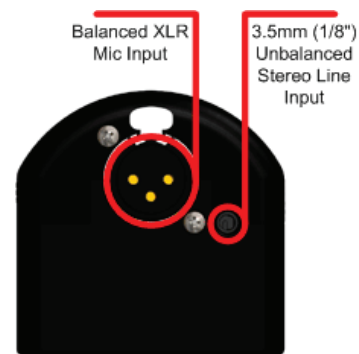

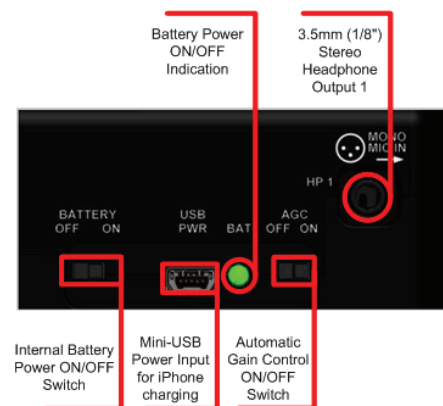

- Press Conferences

- Live and recorded interviews
- Live crosses to the studio
- Noisy and high sound pressure level (SPL) environments

A Complete Remote Solution that Fits in Your Pocket...

Remote broadcasting is now as simple as 1, 2, 3...

1. Download Report-IT Live Enterprise Edition from the iTunes App Store®
2. Attach your iPhone 4 to the Mic Adapter
3. Plug in your mic and headphones and send live 15kHz audio to the studio, or record pristine 20kHz audio at the touch of a button. FTP recordings to the studio later, or insert recordings as 'wrap-arounds' during live remotes to the studio.
